AR

THEIR NEED

Columbus Preparatory Academy initially planned to renovate their existing building section by section. This would have led to constant shifting of their students to different sections, placing students in a construction zone and disrupting the learning environment, and dragging out the construction timeline. After this plan was rejected, the school settled on a modular design to accommodate all of their 450 students.

OUR SOLUTION

Completed in only 52 days, the modular school had space for everyone. Energy efficient heating and cooling systems insured minimized operational costs. Other savings came from design modifications enabled by Whitley's in-house design team. Further, the use of energy efficient systems yielded a school that was relatively inexpensive to operate. Within a year, the energy savings would begin to provide a return on investment.
