FOR: NPH
TYPE: Medical
Dialysis
WITH: MedBuild
(Modspace)

Located north of Philadelphia, NPH is a 150-bed, not-for-profit, acute care general hospital that offers a range of inpatient and outpatient health services. The hospital has a staff of more than 250 physicians representing 40 areas of medicine and surgery; most of whom are board-certified in their areas of specialization. Penn Hospital provides a full complement of patient care.

THEIR NEED

An article in a health magazine attracted a doctor who was soon to move his practice to NPH. He needed space very quickly to avoid a gap in service to his dialysis patients and a new, larger dialysis clinic would catch up to increasing local demand and provide for quick future growth. One of the key points to the project was that the hospital needed to minimize the disruption to patients and hospital personnel during construction.

OUR SOLUTION

NPH turned to Medbuild (a division of Modspace) along with Whitley Mfg. to build the complex. Off-site construction would greatly diminish disruption to the hospital campus. Also, the foundation work did not have to preface construction - this shortened the construction schedule by months. The building was finished within 120 days. Less disruption, a faster time line, and all under budget. The savings allowed the hospital to build a "seamless link" corridor between the existing bldg. and the new wing.
