Their Need Naval Base Kitsap needed to construct a new child development center serving (64) children; (16) infants, (20) pre-toddlers, and (28) toddlers. The building is intended for use by Military personnel on the base.

Our Solution Whitley-Evergreen (Marysville, WA) partnered with Advanced Technology Construction (ATC) to complete the project which required work at a challenging restricted access site and USGBC LEED Silver certification.

The building features sustainable and healthy interior and exterior finishes, including radiant heating at infant rooms and bio-based tile flooring.

ATC installed the pitched roof at the site after the building modules had been set in place.

Despite challenges due to soil conditions at the site, the building features attractive design and sustainable finishes and systems.

Built to U.S. Green Building Council (USGBC) LEED™
(Leadership in Energy + Environmental Design) Specifications.
