# THEIR NEED

A rapidly growing enrollment meant that the school district needed to expand Walton. A budget was set, but three years of problem-solving passed before the project proceeded. Obviously, the district was under pressure to build more for less. Enrollment had continued to grow and inflation had eaten away the power of their budget. The 32-module, 33,000 sq ft. addition would more than triple the size of their existing facilities.

# OUR SOLUTION

Creative design work at Whitley Mfg. halved the allotted number of modules, cutting transportation costs significantly. A unique boiler system was designed requiring 1/10th of the space used by the school's old system. The school incorporates the latest in energy efficient windows and insulation as well as taking advantage of daylighting to minimize electrical use. The construction budget was more than met and creative design features continue to provide long-term savings as well.
