

Dialysis Centers Whitley Healthcare Buildings

Whitley Manufacturing has constructed numerous healthcare centers, including dialysis units, MRI centers and operating theaters. Great care goes into the construction of each unit to provide necessary high standards.

Equally important is the **relocatability** of the unit.

Whitley buildings can be moved quickly and easily from hospital to hospital or from community to community to maximize the value and usefulness of the structure. This is a cost effective way to improve patient care and keep costs at a minimum.

Whitley Buildings are designed to compliment existing structures. You can choose from brick, wood, composite or other exteriors to compliment the aesthetic appeal of your facility.
